

## AWS

### Task 2:

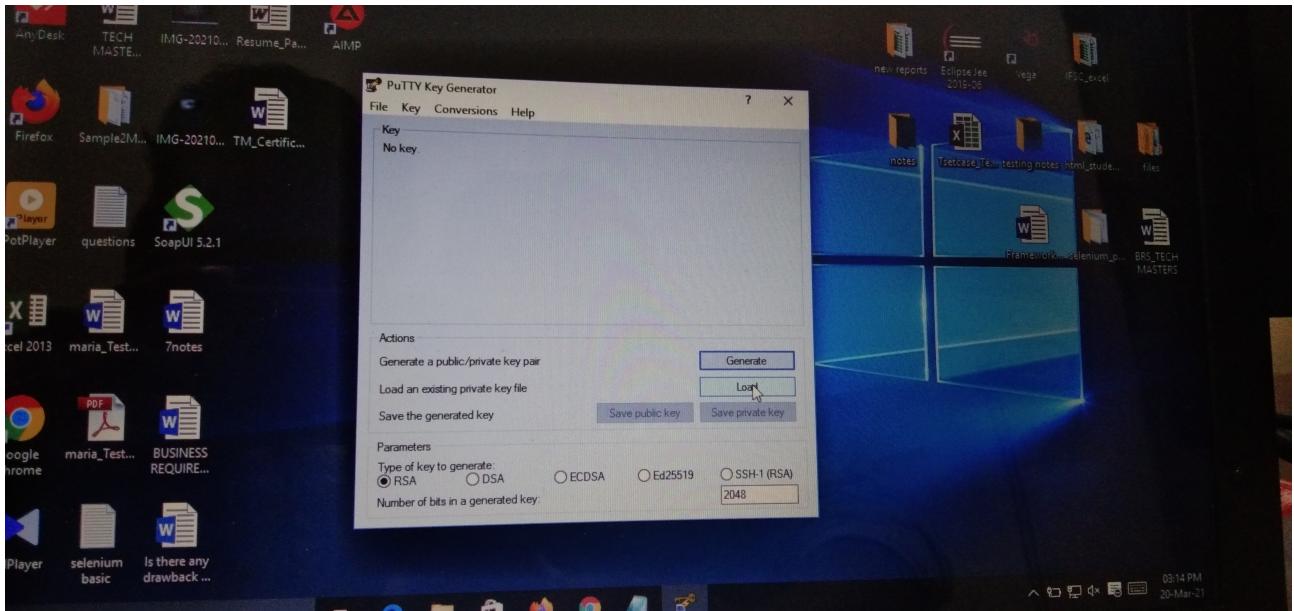

Access the instance using

SSH → Access the instance using root account  
VNC

Remotely access from a pc and from mobile

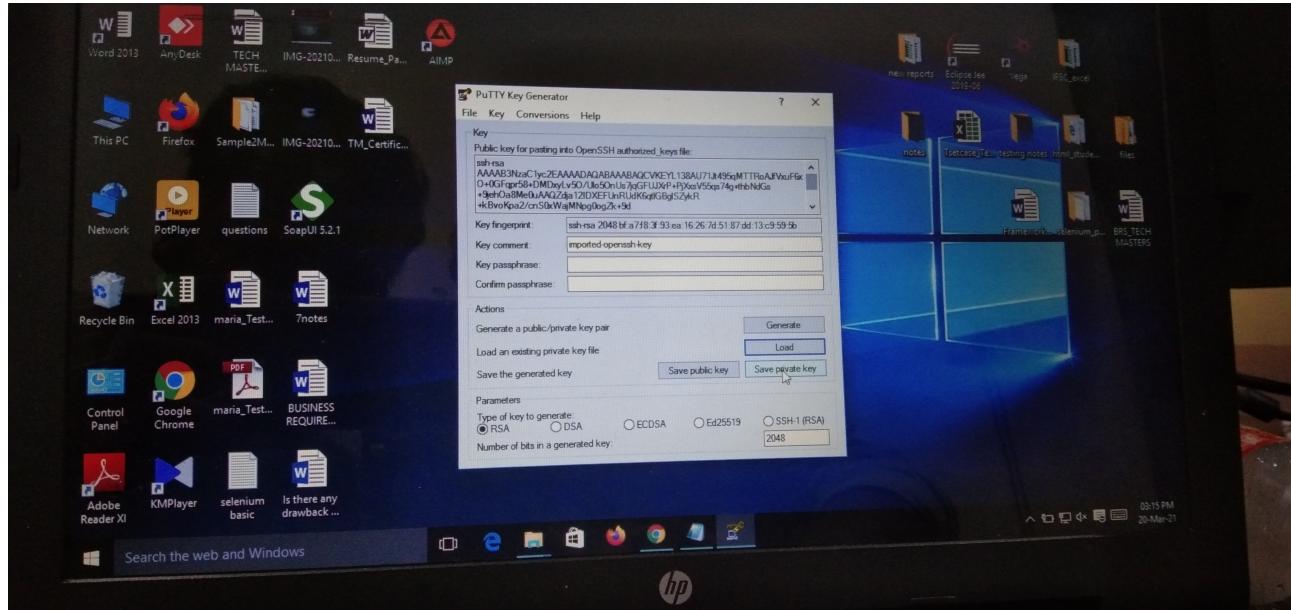

for connecting from windows machine third party tool is needed . Here putty software is used

first generate

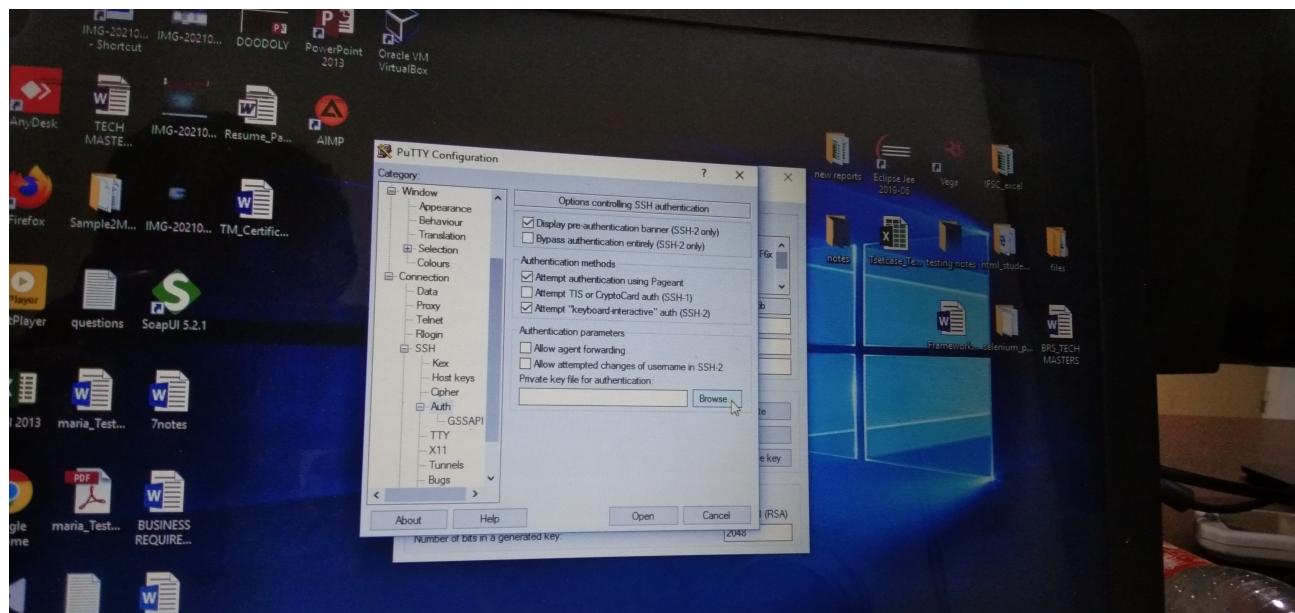

load the generated private key

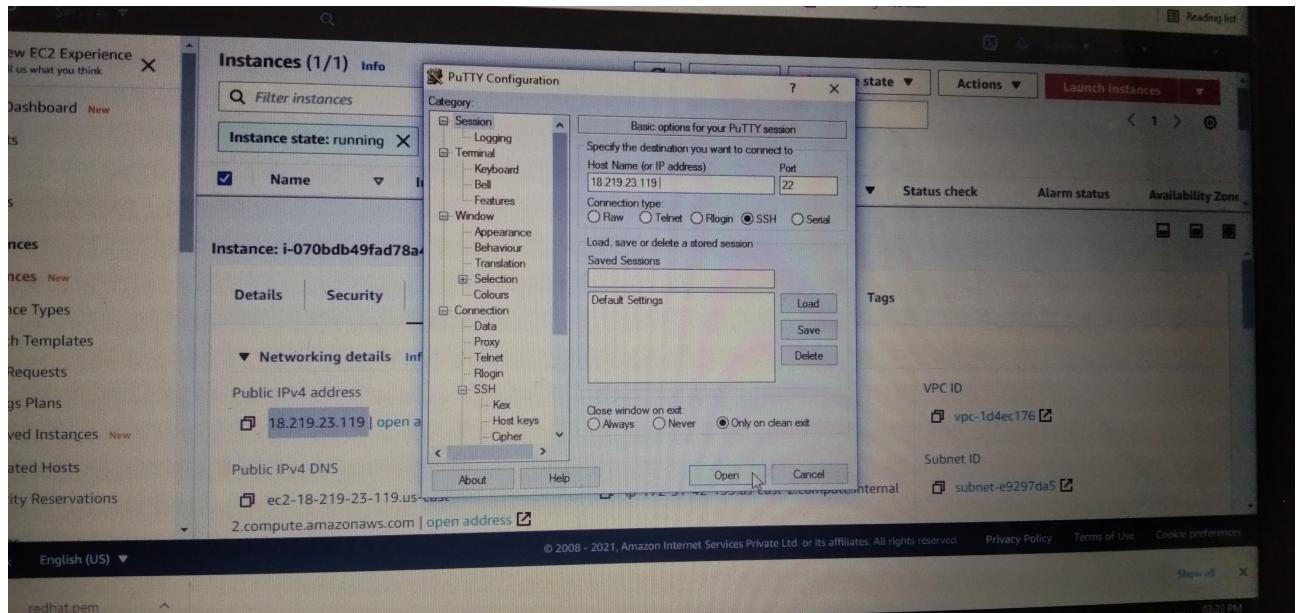

## save private key

next step is to configure  
select SSH>Auth  
browse for private key

setting the public give by AWS to putty

after setting select open  
for login : login with the given user name and the password we set.
